**TO WHOM IT MAY CONCERN**

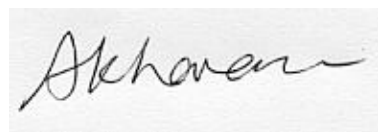

**RE:** Amin Mirhoseini,

Amin finished his MSc program in my laboratory and my role was the advisor. He also passed two of his graduate courses with me including “Industrial Microbiology” and “Enzyme Technology” and he was among the top 50% of a class of eight graduate students.

In terms of personality I found him a hardworking individual with enthusiasm towards learning. He is a trustable and honest assistant for his colleagues in the work place. Although he is able to work independently with little supervision, his cooperative trait was really helpful in the lab and his coworkers could rely on his assistance. This attitude is very productive in an environment in which tolerance and team work is a key. I was really impressed by his organizational skills and his commitment to the work. In terms of creativity, he is capable of putting forward new ideas in relation to work and has an extremely perusal attitude to get the job done. In terms of scientific background, he is trying on deep understanding of scientific matters through studying various sources and material. Overall, I strongly recommend him for any research activity and I am sure he will be a successful candidate. Please contact me if further information is required.

Ferdowsi University of Mashhad (FUM) is the third oldest comprehensive university across the country with an outstanding scientific record in the region.

Sincerely,

---
